NUTRITION TIP OF THE WEEK FROM THE KSC FITNESS CENTERS: Getting Started: Losing Weight for the Long-Term.

Losing weight and keeping it off is not easy. Before you get started on a weight loss program, consider the following tips. They should help you reach your goal of obtaining and maintaining a healthy weight.

- **Set the Right Goals:** Setting effective goals is an important first step. The most productive areas to focus on are the dietary and exercise changes that will lead to long-term weight control. Keep in mind that effective goals are specific, attainable, and forgiving.
- **Reward Success (But Not With Food!):** Rewards that you can control can be used to encourage you to attain your weight control goals, especially those that have been difficult for you to reach. An effective reward is something that is desirable, timely, and contingent on meeting your goal.
- **Balance Your (Food) Checkbook:** This means that you should monitor your eating behavior by observing and recording some aspect of your eating behavior, such as how many calories you eat in a day, how many servings of fruits and vegetables you eat per day, how often and for how long you exercise, etc., or an outcome of these behaviors, such as weight.
- **Avoid a Chain Reaction:** Identify those social and environmental cues that tend to encourage you to undesired eating, and then work to change those cues. For example, you may learn that you're more likely to overeat while watching television, or whenever treats are on display by the office coffee pot.
- **Get the (Fullness) Message:** Changing the way you go about eating can make it easier to eat less without feeling deprived. It takes 15 or more minutes for your brain to get the message you've been fed. So slow down the rate that you eat food. That will allow satiety (fullness) signals to begin to develop by the end of the meal.
